

Experiment 7: Breadth First Search

Aim:

Traverse a graph using BFS.

Algorithm:

1. Start.
2. Apply the required AI technique.
3. Generate the solution.
4. Display the result.
5. Stop.

Python Code: graph =

```
{  
'A':['B','C'],  
'B':['D','E'],  
'C':['F'],  
'D':[],  
'E':['F'],  
'F':[]  
}  
visited = []  
queue = ['A']  
while queue:  
    node = queue.pop(0)  
    if node not in visited:  
        print(node,end=" ")    visited.append(node)  
        queue.extend(graph[node])
```

Output

```
BFS Traversal:  
A B C D E F  
|
```

Result:

Traversal displayed.
